Press Release

Catalytic Combustion Corp. Awarded Emissions Upgrade Project with Major Energy Company

Bloomer, Wisconsin November 9, 2017 – Catalytic Combustion Corporation announced today that their Power Emissions Group has received a new order for RICE NESHAP emissions equipment upgrade on stationary diesel and natural gas engines at major crude oil refinery in the Houston, Texas, area. The refinery plant has over 20 stationary engines that need to comply with EPA's RICE NESHAP 40 CFR part 63 subpart ZZZZ and JJJJ. The emissions equipment manufactured by CCC will reduce nitrogen oxides (NOx), Carbon Monoxide (CO) and Diesel Particulate Matter (DPM). This particular site is located in a non-attainment zone per the EPA and the owner wants to reduce hazardous area pollutants (HAPs) in addition to operating these engines more frequently. After the emissions equipment is installed the owner will have much more flexibility in running these engines while reducing harmful emissions that is generated when running these engines. CCC is providing all the necessary equipment from nuts, bolts, gaskets to the catalytic housing with monitors for EPA reporting. This Fortune 500 company went through a rigorous selection process for this award and CCC was selected on experience, manufacturing capabilities, response time, and engineering resources. The project is expected to be completed by the end of Q1-2018.

About Catalytic Combustion Corporation (CCC)

CCC, an Emissions Technology Company, has a diversified base with five (5) major business units: Industrial, Catalyst, Exhaust, Power Emissions and Contract Manufacturing. The Power Emissions Group's products use patented technology to reduce the output of NOx, CO, PM and VOCs that are harmful to the environment and its inhabitants. CCC engineers, manufactures, and services emission products for a wide variety of markets including data centers, commercial food service, consumer appliances, off-road engines, power generation, stationary engines, marine, rail, gas compression, production painting and printing, pharmaceutical, chemical processing and a wide range of other emission control applications. A multi-disciplined engineering staff and a 24/7/365 field service department supports the entire company.
