Catalytic Combustion Corporation, an Emissions Technology Company, has a diversified base with (5) major business units:

- Catalyst • Exhaust • Industrial • Power Emissions • Contract Manufacturing •

Catalytic Combustion Corporation, an Emissions Company, was founded in 1950 by individuals who recognized the need for air pollution control and catalyst technology. CCC introduced cutting-edge technology with the development of the first ever US patented catalyst to destroy volatile organic compounds (VOCs). A multi-disciplined engineering staff and 24/7 service department supports all divisions.
